

EXECUTIVE WORKBOOK

The Emotional Mastery Protocol

Intelligence, Anger & Conflict

The Baseline

Assessment

Before we can manage our emotional responses, we must establish a baseline. Rate your current capabilities on a scale of 1 to 10. Be ruthlessly honest. The gap between where you are and where you want to be is where the work happens.

1. Self-Awareness (Speed of Recognizing Emotional Shifts)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

2. Self-Regulation (Impulse Control Under High Stress)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

3. Empathy (Accurately Reading 'The Room' and Individuals)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

4. Conflict Assertion (Addressing Friction Directly & Respectfully)

1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

"It is impossible to change what you do not acknowledge."

Physical Symptoms

Map

MODULE 1 •
FOUNDATION

An Amygdala Hijack happens biologically before it happens cognitively. Your body "knows" you are angry or anxious before your rational brain does. By identifying your physical 'tells', you buy yourself the 6-second window needed to pause.

When I feel Anxious/Threatened

e.g., Stomach knots, shallow breathing, racing thoughts.

When I feel Irritated/Angry

e.g., Clenched jaw, raised voice, tight neck muscles.

The 6-Second Pause Protocol

The cortisol and adrenaline surge takes roughly 6 seconds to absorb into the bloodstream. When you observe your physical tell, STOP. Inhale deeply for 4 seconds, exhale for 4 seconds. Let the Prefrontal Cortex come back online.

Decoding the Iceberg

MODULE 2 • ANGER MANAGEMENT

Anger is rarely a primary emotion. It is a protective, secondary emotion that acts as armor for deeper vulnerabilities. You cannot resolve the surface anger until you address the primary emotion underneath.

Visible Behaviors (The 10%)

Yelling

Sarcasm

Silence

THE WATERLINE

Hidden Primary Emotions (The 90%)

Map your recent angry moments. What was actually underneath?

Scenario 1:

Scenario 2:

My Deepest Triggers

Cognitive Restructuring

MODULE 2 • ANGER MANAGEMENT

The A-B-C-D-E Model (Dr. Albert Ellis). You are not angered by the event, but by the story you tell yourself about the event. Challenge cognitive distortions (catastrophizing, personalizing) to change your emotional outcome.

A

Activating Event

The factual event. No opinions.

B

Belief (The Story)

What irrational or exaggerated thought did you have? ("They hate me," "This always happens.")

C

Consequence

How you felt and acted because of 'B' (Angry, withdrawn, snapped at team).

D

Dispute

Challenge 'B'. Is it strictly true? What is the alternative evidence?

The Hard Conversation Script

MODULE 3 • CONFLICT
NAVIGATION

Anxiety often causes us to ramble or attack during conflict. Use the D.E.S.C script to prepare your approach. It sequences facts, feelings, and solutions into a non-threatening, assertive structure.

1. DESCRIBE the factual situation

"When you..." (Stick strictly to observable facts, free of judgment)

2. EXPRESS your feelings/impact

"...I feel/It causes..." (Use 'I' statements, avoid blame)

3. SPECIFY the behavioral change

"...I need you to..." (Be clear, concise, and actionable)

4. CONSEQUENCES (The positive result)

"...so that we can..." (Focus on mutual gain and shared goals)

The 30-Day Mastery Contract

MODULE 5 •
INTEGRATION

Inspiration has a half-life of 24 hours. Behavioral change requires commitment, repetition, and accountability. Formalize your protocol below.

OFFICIAL COMMITMENT

Three Emotional Intelligence Habits

e.g., Morning emotional check-in, naming emotions highly precisely.

- 1. _____
- 2. _____
- 3. _____

Two Anger Management Protocols

e.g., Implementing a 20-minute physical timeout before responding.

- 1. _____
- 2. _____

The Accountability Structure

Who will check in on your progress, and exactly when?

Signature & Date

**Master Your Emotions.
Transform Anger.
Resolve Conflict.**
